Rollepaal Multi-Layer Die-Heads offer total flexibility

Brett Martin is a global manufacturer with over 60 years of experience in plastic manufacturing. Headquartered in the UK, the company employs 1,050 staff across its operations. Brett Martin specializes in producing various products, including plastic sheets, daylight systems, and plumbing and drainage solutions for various industries. With a turnover of £255m and exports worth £100m globally, Brett Martin serves customers in over 70 countries worldwide. For more information, visit www.brettmartin.com.

For over 16 years, Rollepaal has partnered with Brett Martin, a renowned provider of complete underground drainage systems in the United Kingdom. During a recent interview with Mark Spacie, the Managing Director of Brett Martin Plumbing Drainage Staveley site, the high quality, value, and strategic benefits of Rollepaal's solutions, alongside Brett Martin's satisfaction with the partnership and endorsement of the brand, were underscored.

Mark endorsed the reliability and performance of Rollepaal's machinery "We are very familiar with the machines and their reliability. The service we receive has been dependable. It's a trusted formula for us - we know it's reliable, it performs well, and we're confident in the product.". Moreover, Mark explained how Brett Martin's adoption of Rollepaal's solutions aligns seamlessly with Brett Martin's strategic objectives. "With the multi-wall lines, we can foam the product and make a solid wall product and use recycled material, which gives us total flexibility. The foam core multi-wall pipe helps reduce weight and therefore the environmental impact while our products maintain comparable mechanical and physical properties with solid wall products, ensuring compliance with all current relevant BS EN standards."

The implementation process with Rollepaal has been remarkably smooth. Mark recounts, "We travelled to the Rollepaal facility in Holland, where we reviewed the line as it was being assembled. Our engineers had the

chance to see everything firsthand and meet the team, which proved very beneficial. The equipment was delivered on time, and the Rollepaal team swiftly commissioned it, with the line up and running within a couple of days. It was a smooth process."

While Rollepaal's solutions may not be the most affordable, Mark attests to their exceptional value. "Rollepaal give you value for money. The product is reliable, and the longevity more than offsets the initial cost. You're paying more for the equipment than some of the other competitor products, but we get repeatability and longevity from the equipment and the product we manufacture." Continuing on this point, Mark said, "They are good machines, and within the industry, Rollepaal is held in high esteem for their overall technology and die set designs. If somebody asked me, I would say they are probably one of the best when producing pipe extrusion machinery. It's a good product." As Mark Spacie affirms, "I would recommend Rollepaal machinery.

"Rollepaal gives you value for money"

Mark Spacie, Managing Director
